

Blades Angus

Red & Black Angus
Bull Sale

April 6, 2026

Foothills Auctioneers

Stavelly, AB

1:30 PM

On offer: 35 Red & Black Angus Yearlings

Genotype tested for Leptin, PMCH, IGF2 & CRH

Welcome to our Bull Sale

**Blades Angus
Black and Red Angus Bull Sale
Gloria Blades 403-646-2102
Sale @ 1:30, Lunch @ noon
Monday April 6, 2026 Foothills
Auctioneers, Stavelly AB**

Thank you to everyone who has shown interest in our program. We really appreciate your support. We are down on sale bulls this year. Something went wrong with the 2-year-old bull with our 1 year heifers, all turned up open.

Our bulls are the only bulls fed at the feedlot.

They are just being fed a 20% backgrounding ration. We do not creep feed. These bulls have been developed, not pushed.

We strive to produce moderate-framed, deep-bodied, easy-fleshing, good uddered cattle with lots of capacity.

We emphasize calving ease and superior carcass quality.

Again this year, we used Quantum Genetix Q-Select to test for Leptin (feed efficiency), PMCH (tenderness and marbling), IGF2 (ribeye), CRH (growth).

The bulls received Fusguard to protect against footrot.

We look forward to seeing you Monday, April 6 at Foothills Auctioneers, Stavelly AB.

Please come early for lunch.
Gloria Blades

BULLS GOING BACK TO FEEDLOT SHOULD BE INSURED

Viewing the bulls

Bulls can be viewed at Elk Ridge Feedlot, northwest of Nanton. Please call 403-603-8212 to view.

Bulls will be at Foothills Auctioneers for viewing Sunday, April 5th later afternoon.

\$100/bull discount if picked up at Foothills on Sale Day.

To set up phone bids or on order bids, please call Doug McDonald 403-312-9407 or Tyler Sawley 403-652-6829. Online bidding will be available via www.foothillsauctioneers.com. Click on the "Live Auction Webcast" tab to set up an account to view and bid.

35 head on offer

**All bulls are semen tested and
fully guaranteed**

QUALITY, AFFORDABLE, RANCH RAISED BULLS FOR RANCHERS!

Performance Terms Used in this Catalog

BW: Birth weight — actual birth weight in pounds

205D: weaning weight adjusted to 205 days

365D: yearling weight adjusted to 365 days

Leptin: feed efficiency TT CT CC

PMCH: tenderness & marbling AA AT TT

IGF2: ribeye CC CT TT

CRH: growth GG CG CC

AOD: age of dam

Explanation of EPD Terms

EPD = Expected Progeny Differences. All EPD information listed is calculated by the Canadian Angus Performance program. EPDs are a tool used to predict how each bull rates against his own contemporary group and the rest of the Red or Black Angus breed. Breed EPD averages for Angus calves born in 2025 to compare to are:

Red Angus

Black Angus

BW: This value predicts the difference in average birth weight of a bulls calves compared to breed average

WW: Indicates the ability of a sires calves to grow from birth to weaning (expressed in pounds)

YW: Indicates the ability of a sires calves to grow from birth to yearling (expressed in pounds)

Milk: A reflection of the milking ability of a bulls daughters. It compares the difference in gain between birth to weaning of a bulls daughters calves from daughters of other sires evaluated.

CE: The average difference in ease with which a sires calves will be born to first calf heifers.

Supplemental information including genotype test, scrotal measurements and present weights will be available in printed form on sale day!

All bulls will be semen tested, scrotal measured and examined by Nanton Vet Clinic before the sale, with us fully guaranteeing them.

Unable to attend?

If you cannot attend but wish to participate, please feel free to call any of our very knowledgeable sale staff. We will be happy to help you with your selection and purchase. **SATISFACTION GUARANTEED!**

Terms & Conditions

Terms

The terms of the sale are cash or cheque payable at par at Stavely, AB. The right of the property shall not pass until settlement is made. All settlements must be made with the clerks of the sale before any cattle will be released.

Bids

Every animal entering the ring will be sold to the highest bidder. A floor price will apply to each animal consigned.

Disputes

In case of disputes, bidding will be reopened between the parties involved. If no further bid is made, the buyer will be the person from whom the auctioneer accepted the last bid. The auctioneer's decision in such matters will be final.

Purchasers Risk

Each animal becomes the risk of the purchaser as soon as sold.

Announcements

Errors discovered in the catalog will be corrected by announcements from the Auction Stand at sale time and such corrections will take precedence over the printed matter in the catalog.

Certificate of Registry

A certificate of registry duly transferred will be furnished to the buyer for each animal after settlement is made.

Breeders Guarantee

Blades Angus has done everything possible to assure you, the buyer, that every bull in the sale will be a breeder; however, should a problem arise, please inform the seller so further arrangements may be made.

Accidents

Although every precaution will be taken to protect the safety and comfort of buyers, neither the auctioneer nor any owner assumes any responsibility in this matter and disclaims any liability, legal or otherwise, in the event of accident or loss of property.

Liability

Foothills Auction is acting as an agent only and assumes no responsibility for representations made by the seller. Purchasers must look to the seller for fulfillment of all guarantees and representations made hereunder.

Blades Angus is an exceptional example of how using Q-Select for trait selection can help further enhance your herd performance. Testing your animals allows you to take a look at what is inside your beef animal, no longer are we evaluating animals solely on their phenotypic qualities. Q-Select results enable you to compare cattle across breeds to select genotypes that have been proven to increase your herd and your business. Thus, knowing what genotypes you are incorporating into your herd with a tested bull is a powerful management decision, increasing your ability to produce higher quality calves, quicker finishing feeder animals, with females that will last longer in your herd.

So, What is Q-Select?

Leptin is associated with increased fat deposition in beef cattle and is responsible for regulating energy by suppressing the intake of nutrients by an animal. Ranchers seek to identify animals with the mutated "Leptin T" allele, with the ideal animal being "Leptin TT" (those that inherit a Leptin T allele from each parent). Those animals exhibit increased appetite resulting in a subsequent increase in marbling and fat deposits. Whether you are selecting for weight gain, milk production, or meat quality, Leptin plays a role. PMCH is also an influential gene, which is linked to increased ribeye area whilst maintaining and enhancing tenderness (10% improvement). Such preferable characteristics can be achieved through selecting bulls with a mutated "PMCH A" allele with the ideal genotypes being "PMCH AA". Within the Blades Angus herd, you are always guaranteed a tender and high-quality beef animal with some of the strongest PMCH characteristics in any herd. In conjunction with "Leptin TT" genotypes, "PMCH AA" animals have the ability to finish for slaughter approximately 30 days faster with an ADB of > 3 lbs, while also producing a higher rate of AAA Canadian grade feed. Animals with the Leptin mutation have also been connected with higher milk production (1.5 kg), heavier weaning weights (27 lbs) and greater cow longevity (2 years). Milk production is also connected to the Leptin gene, as cattle with "Leptin T" alleles have been shown to have higher milk production than "Leptin CC" cows, while also weaning off significantly heavier beef calves. Selecting for "IGF2 C" mutations in animals has been found to increase ribeye area size, therefore, adding to the enhanced genotype of your animal. Cattle that possess homozygous CC alleles over homozygous TT increases lean growth of your animal. CRH also has a positive effect on ribeye area, whilst also increasing hot standing carcass weight (HSCW), animals with a mutated "CRG-G" allele showcase this over "CRH CC" animals. These two performance traits increase the weight gain and muscle size of your animal, not only having a positive impact on weaning weights, but also through the beef production cycle. Making them a more efficient animal to maintain and keep body condition to increase conception rate, allowing females to stay up to two years longer in your breeding herd, whilst also allowing for increased fat and muscling on cattle fattening for market. Another added benefit. Another added benefit to selecting the mutated "CRH G" allele is that it has been shown to improve docility in beef animals since CRH is associated with the stress hormone. Through the selection and breeding that Gloria continues to make each year, her bull battery continues to get stronger and stronger genetically. Her Q-Select results reflect the high-quality Angus bulls you see within the catalog and possess and strong genetic advantage to start making enhancements in your herd in just one generation.

-Kristy McCormack

Reference Sires

Always keep in mind, 50% of a calf's birth weight relates back to its dam.
